

Peachtree 2012 New Features

Vendor Management Center

All the specific vendor information you need on one customizable dashboard. Like the Customer Management Center and Inventory and Services Management Center in prior releases, the new Vendor Management Center gives you a single go-to place for all information relating to one vendor. Having this information readily at hand can help you negotiate better prices and terms from your vendors and better manage your relationships.

Copy Transactions

Quickly and easily create a new transaction based on a previously saved one. Many transactions are only slightly different from previous ones. Now you can simply copy a past transaction and change what needs to be changed (a date, a quantity, etc.). Works for Quotes, Sales Orders, Proposals, Sales Invoicing, Purchase Orders, Purchase Invoices, and General Journal Entries. Entering transactions this way will save you a great deal of time and help you better serve your customers. It will also help eliminate the errors associated with re-keying all information.

Sage Peachtree Business Intelligence

This is a new, fully integrated reporting and analysis solution that supplements the reporting capability in Sage Peachtree to make it easy to create powerful, customized reports in the tool you already use—Microsoft Excel. Sage Peachtree Business Intelligence makes it simple to extract and analyze the information you need to make solid, timely business decisions.

Expanded Payroll Fields

More easily record and report the information you need for compliance with new legislative initiatives. Provides more data fields on both the employee and employer/company payroll records to allow for recording of additional benefits, deductions and liabilities so it's easier to comply with upcoming legislative requirements. There are now a maximum of 40 fields available for each employee record and for each employer/company record. This enhancement will help you prepare for the mandatory reporting of healthcare insurance costs, to start in 2012, by implementing them sooner rather than later.

Management Center Enhancements

Management Centers in Sage Peachtree now provide even more information, enabling you to find what you need, when you need it and how you want it. Enhancements include the automatic totaling of columns from transaction lists; changing the number of lines displayed within each module; and making it easier to find default and selected items in a scrolled down list when filtering for information.

Sage Peachtree System Check

Sage Peachtree System Check is an early warning system designed to help identify potential application issues and offer advice on how to resolve them. When you can head off problems before they occur and solve them yourself, you can worry less about possible downtime and lost productivity.

Plus a few other improvements

- Consistent treatment of decimals, fractions and rounding.
- Compatibility improvements for Windows Vista and Windows 7 operating systems.
- Better synchronization for Sage Peachtree Direct Deposit and Sage Peachtree Online Backup.
- Import improvements for account reconciliation and inventory adjustments.
